IGNITION STAFF SUCCESSFULLY COMPLETE LEARNERSHIPS

Eighty members of the Ignition group recently completed two courses facilitated by Felix Risk Training Consultants.

The first group of employees began a course in Long-term Insurance in May 2016 while the second group commenced with the National Certificate Generic Management in August 2016.

Aimed at employees who serve in junior management and team leader positions, the National Certificate Generic Management is geared towards preparing employees for management roles – and the numerous responsibilities that come with the position – through a multi-faceted year-long programme. The course provides learners with in-depth insight through a four module programme, covering People Management, Workplace Management, Decision-making and Unit Management.

The Long-term Insurance course a comprehensive qualification through which candidates are lead from the introductory purposes of this form of insurance to the identification of fraudulent activity in the field and provides the candidate with the skills and techniques required to build relationships with clients in a financial services environment.

Training took place onsite monthly and learners documented their progress through personal log books as well as through practical application in the workplace which was verified by workplace coaches.

“The objective of the programmes was achieved and more skilled workers ensure greater success for growth within the Ignition Group. It is vital that those entrusted with taking the business forward are provided with the right tools and armed with the right attitude to motivate all staff,” said Bernadette Felix, Director of Felix Risk Training Consultants (FRTC).
